Offsite Data Backup

Online, automated disaster recovery service for your servers, desktops and laptops.

Inherent with any type of technology is always some type of risk. The risk of losing data or having a data failure are things that can keep any business owner awake at night; but, for medical practices like yours, dealing with sensitive patient data, this risk is even more impactful. You have a responsibility to ensure that your patients' data is kept secured by whatever means necessary. The risk of having someone's Personal Health Information (PHI) fall into the wrong hands is a problem no practice wants to face.

Keeping data stored on hard disks within your office might work okay for a while, but what happens when you have a back-up drive that goes bad? What if data's lost through natural disaster or a simple technical error? Risky In-house data management of backups for secure PHI is definitely not advised.

You should proactively plan for the worst and hope for the best. Developing a Disaster Recovery Strategy should be an essential part of your practice's growth and business plan. **1st Providers' Offsite Data Backup Service** should be a key part of that strategy - the perfect solution for keeping your PHI safe and secure.

The solution includes:

Advanced File Versioning for Any-point-in-time Recovery

Retrieve files easily at any point in time as multiple versions of the same file are stored.

Email Confirmations

Be assured that your data backup has actually occurred with automated emails sent after every completed backup to verify that it is done.

Extreme File Compression (Up to 90%)

Reduce storage costs as our revolutionary compression system can shrink the file size of your stored data without compromising data integrity.

Bit Level Backup

With our amazing bit level technology, maximize your daily backup speeds and minimize bandwidth usage!

Maximum Security

Multiple levels of encryption to help with compliance - choose up to AES 256-bit.

ODB Features:

- ✔ Nightly backup to our secure remote servers
- ✔ Guaranteed no tapes, CDs or DVDs to buy which saves you additional costs
- ✔ Email confirmation of verified nightly backups
- ✔ Recoverability from local disaster or data corruption with ease
- ✔ Faster recovery times
- ✔ No third party software to buy or annual renewals
